
a
Reliability, pooled ten-fold
native
intercept recalibration
logistic recalibration
observed proportion autistic
mean predicted probability (ten equal-width bins)
marker area ∝ bin count
bars: 95% Wilson interval
b
Reliability, site withheld
native
intercept recalibration
logistic recalibration
observed proportion autistic
mean predicted probability (ten equal-width bins)
marker area ∝ bin count
bars: 95% Wilson interval
c
Average predicted risk against observed rate
native
intercept recalibration
logistic recalibration
unpenalised intercept (diagnostic)
pooled ten-fold
native
intercept recalibration
logistic recalibration
unpenalised intercept (diagnostic)
site withheld
calibration-in-the-large (logit; negative = over-prediction)
bars: 95% site-clustered bootstrap interval; diamond: diagnostic refit, not a correction
d
Every site with at least 30 participants
native
intercept recalibration
USM

MAX_MUN
TRINITY
KKI
after recalibration:
I^2 = 63%, τ = 0.37
calibration-in-the-large at the withheld site (logit)
bars: 95% Wald interval of the native estimate
